OKERE CALEB

Lagos, Nigeria • 08109407337 • Frankokere73@gmail.com • github.com/frankokere73-oss

PROFESSIONAL SUMMARY

Results-driven Data Analyst with hands-on project and workplace experience in data cleaning, SQL querying, statistical analysis, and dashboard development using Python, SQL, Power BI, and Excel. Adept at transforming raw datasets into actionable business insights. Seeking to contribute analytical skills to a data-driven team in an analyst role.

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, Matplotlib, Seaborn) • SQL (Joins, Aggregations, CTEs, Subqueries)
BI & Visualization: Power BI • Tableau • Excel (Pivot Tables, VLOOKUP, Advanced Charts)
Analysis: Exploratory Data Analysis (EDA) • Data Cleaning & Preprocessing • RFM Analysis • Predictive Modeling
AI AUTOMATION: (n8n) still learning

WORK EXPERIENCE

Data Analyst — Ahavah Energy Solutions

January 2026 – Present

- Organized and structured company sales and operations data, improving accuracy and accessibility of monthly business reporting
- Tracked and reported monthly sales performance, giving leadership clear visibility into revenue trends over time
- Analyzed sales and installation records by location to map where products sold and where solar panels/solar systems were installed, surfacing regional performance trends
- Supported proactive customer service by identifying upcoming maintenance windows in advance, reducing reliance on reactive scheduling

PROJECT EXPERIENCE

Customer Churn Prediction & Analysis | SQL · Python · Pandas

- Analyzed a 7,000+ record IBM Telco-style dataset to identify drivers of customer churn using SQL aggregations and CTEs
- Built a churn risk segmentation model that flagged ~26% of customers as high-risk, enabling targeted retention strategies
- Identified that month-to-month contract customers churned at 3x the rate of annual contract holders
- Delivered actionable recommendations projected to reduce churn by up to 15% if implemented

Diabetes Patient Data Analysis | Python · Pandas · Matplotlib · Seaborn

- Analyzed a 768-record patient dataset to identify age groups and BMI bands with highest diabetes prevalence
- Created 8+ visualizations (heatmaps, box plots, histograms) to surface correlations between clinical features and outcomes
- Discovered that patients aged 45–60 with BMI > 30 accounted for over 40% of positive diagnoses

Sales Performance Dashboard | *Power BI · Excel*

- Developed an interactive Power BI dashboard analyzing 12 months of sales data across 5 product categories and 3 regions
- Identified top-performing product lines contributing 62% of total revenue; surfaced underperforming SKUs for review

Tracked monthly revenue trends, revealing a 23% Q4 spike tied to seasonal demand — insight used to inform inventory planning

EDUCATION

B.Sc. Industrial Physics
Nnamdi Azikiwe University, Awka, Nigeria
